OBJECTIVE

Motivated Computer Engineering student seeking opportunities to apply my knowledge in software development, computer hardware, and problem-solving while continuously developing my technical and professional skills.

EDUCATION

Bachelor of Science in Computer Engineering

2024 – Present

Polytechnic University of the Philippines – Sta. Mesa

Second Year

Relevant Coursework: Programming and Logic Design, Object Oriented Programming, Operating Systems

Award: IBM Skills attendee

STEM

2022 – 2024

Our Lady of Fatima University – Antipolo

Award: High Honor

SKILLS

Programming: Python • HTML • CSS

Software & Tools: GitHub • VS Code • Overleaf • Google Docs • Excel • Canva • Microsoft Powerpoint • AutoCAD

AI: ChatGPT • Gemini • Claude

PROJECTS

Shoot-The-Answer Python Game

Personal Project

An educational shooting game where players solve math equations by shooting the correct answer from multiple choices to earn points.

Quiz Generator

Personal Project

Developed a quiz generator that allows users to input custom questions and answers, automatically creating an interactive quiz for participants.

Data Structures & Algorithms Web Program

Group Project

Developed a collection of interactive web applications that demonstrate fundamental data structures and algorithms using Python, Flask, HTML, CSS, and JavaScript. The suite includes a Customer Queue Management System, a Binary Tree Visualizer, a Dictionary Binary Search Tree, and a Sorting Algorithm Visualizer.

Metro Train Route Finder

Group Project

An interactive metro navigation tool that lets users select a starting and destination station to generate optimal routes, including intermediate stops and estimated fare. Provides a clear breakdown of the journey to support efficient travel planning in the metro network.
